Example document

This is an example document to demonstrate PDF generation with dynamic values.

Your name:
Name

Your surname:
Surname

It also demonstrates repeatability reduceness. **Name Surname** is your name and it was requested by form only once. Just focus on your document, everything else is automatic!

And that's not all. You can use expressions to manipulate input data and derive new values. Simple concatenation of your name is **NameSurname**.

Document templates are versioned. Most recent version is a draft. Changes take effect right after its activation. Discard draft changes and move backward is also possible.

Two ways to generate the document:

- Fill in Form

- Call REST API

Again, just focus on your document. Form and API are automatically prepared for you. Immediately.

Let's continue, because it's still not everything eledo can do for you!

We mentioned repetition and therefore you can quickly prepare list of your hobbies like this:

- Cycling

You can repeat any block elements, whether it's List item, Table row or column. Or table itself? Yes of course!

Define multiple input fields within a repetition and you get repetition of objects in API and Form.

Outside repetition you can reduce values in it. Sum is a good example, but it's not suitable for hobby list. Count of your hobbies is **1**.

To keep it short we won't mention Conditional blocks, Digital signature placeholder, Variables and Nested documents.
